Foreword

Welcome to November 2.0!

November has been praised for years by musicians, publishers and engravers as one of the finest and most vivid fonts ever designed for music notation programs.

For use in programs such as Finale, Sibelius or LilyPond, November 2.0 now includes a astonishing variety of symbols, from usual shapes such as noteheads, clefs and rests to rarer characters like microtonal accidentals, special techniques, plain-song clefs or baroque ornaments, ranging from the Renaissance[1] to today's avant-garde music.

Based on the principle that each detail means as much as the whole, crafted with ultimate care, November 2.0 is a font of unequalled coherence.

While in tune with the most recent technologies, its inspiration comes from the art of traditional music engraving.

Whichever period of music you deal with, November 2.0 will make your score look beautiful and vibrant, as never before.

What is new in November 2.0?

Nearly 700 new symbols have been added to the font for a total of over **1000** distinct characters. But of course it's not just about the quantity: the glyphs have been carefully checked with an unmatched attention to details - Beauty makes no compromise.

Moreover, November 2.0 is *the first commercial font*[2] to comply with SMuFL- **S**tandard **Mu**sic **F**ont **L**ayout -, the future of music font standard initiated by Steinberg Media Technologies and based on Unicode.

Technically, November 2.0 is made of PostScript outlines wrapped in cross-platform, universal Open Type Format.

The November 2.0 package includes advanced support for Finale, Sibelius & LilyPond, and is delivered with useful extras and rich metadata.

Check out our Examples that follow the Character Map.

We hope that you will feel as much *joy* using November 2.0 in your music as we did designing it!

Robert Piéchaud & the Klemm team
www.klemm-music.de/november2

---

[1] For a full support of medieval music (Gregorian, École de Nostre-Dame, Machault etc.), checkout our Medieval 2.0 package.

[2] The first *non-commercial* SMuFL font is *Bravura*, designed by Daniel Spreadbury.

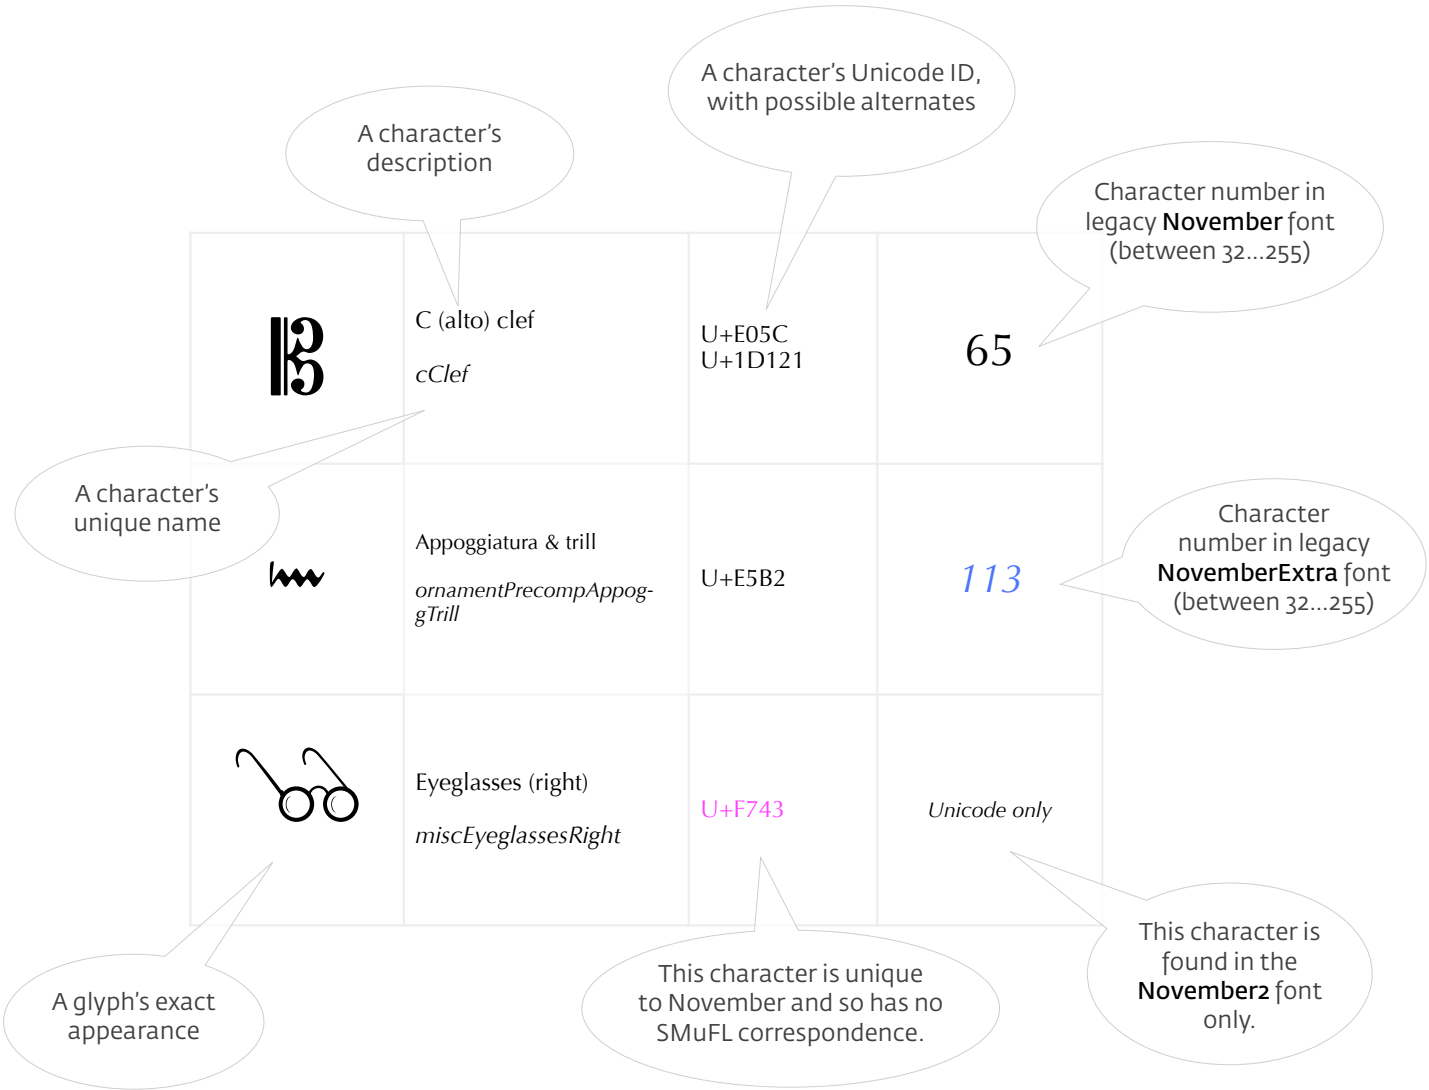
November 2.0 Character Map

Below are all the glyphs[1] found in **November2** and organized in various tables.
The legacy fonts **November** and **NovemberExtra** are provided and installed by convenience for programs that do not fully support Unicode music symbols: Finale older than 2012, Sibelius etc.

Please read the Requirement & Installation section carefully for specific information about November 2.0 and Finale, Sibelius or LilyPond.

To search this documentation, simply use your PDF viewer's search tool.

Character map guide:



[1] A *glyph* can be defined as the graphical incarnation of a more abstract *character*, while a symbol can mean both, depending on the context… But in musical typography, these distinctions tend to blur.

Noteheads & Individual Notes

SMuFL includes a great deal of noteheads, and November 2.0 implements most of them, plus some that are not in SMuFL yet.

Individual notes (with or without flags) are used in text entry contexts (such as tempo marks). Notation programs generally construct notes by assembling noteheads, flags and stem vectorial primitives.

Noteflags

Beyond the 16th note, score programs such as Finale or Sibelius construct flags using the *flagInternalUp/Down* glyphs, while LilyPond uses explicit glyphs.

Microtonal & Non-Standard Accidentals

There is a tremendous profusion of microtonal or non-standard accidentals, reflecting western music's evolution and historical experiments, but also the extraordinary subtlety of traditional non-western music systems.
From its first issue in 1999, November has expanded its microtonal repertoire a great deal in order to cover even more situations, and even beyond SMuFL.

Ornaments & Arpeggios

While SMuFL has gone deep into the exuberant jungle of ornamentation, November 2.0 supports even more symbols, with a special focus on French Baroque music.

Repeated Lines & Other "Wiggles"

Elements of different length and size can be combined to create "dynamic" lines, for instance:

or even stranger ones!

Requirements & Installation

November 2.0 ships with advanced support for Finale, Sibelius and LilyPond. The package includes of course the fonts themselves, **November2.otf** (the main font representing November 2.0), **November.otf** & **NovemberExtra.otf** (the "legacy" fonts coming from version 1.0), and important components for each software, such as libraries, default files, house styles and snippets.

Below are the configuration details for all software/version/platform combinations.

The installer works for any version of Mac OS from 10.4 on, or Windows from XP on.

Finale

2012 and up (Mac & Windows)

With Finale 2012 and more recent, you have full access to November2 1000+ glyphs, and the best compliancy is certainly achieved from Finale 2014 on, thanks to the advanced Unicode support. Comparing with other notation programs, Finale has always been particularly friendly with 3rd-party fonts.

Before 2012

As previous versions of Finale did not support Unicode, November2 cannot be used directly. However, November & NovemberExtra can be used. To facilitate this situation, comparing with version 1.0, the NovemberExtra character map has been enriched a great deal so as to make available as many new symbols as possible, ranging (if you count November) to a set of about 450 symbols - not so bad. So to be clear, symbols that are marked "Unicode only" are not accessible in pre-2012 Finale versions.

For using November in this limited fashion, the November 2.0 package also includes legacy component files (templates and libraries) for versions as early as Finale 2001.

Sibelius

Sibelius 5, 6, 7, 7.5 and up, Mac only

The compatibility is not as optimal as with Finale 2014, but there are workable solutions. In a way, the situation is similar to pre-2012 Finale versions: November & NovemberExtra must be used as Sibelius (as of 7.5.1) cannot access music symbols beyond the "symbol" [32…255] range. So with adding legacy November and NovemberExtra fonts, you have about 450 symbols to start with, plus some others that are obtained by combination[1] using Sibelius music symbol construction system.

In order to access potentially all other November2 symbols - the Unicode ones - you can also enter them directly as text. This is a bit akward but usable nonetheless.

And to make things easier, we designed a special November plugin for Sibelius that cleans up score items such as dynamics after conversion.

[1] Accordion couplers, for instance.

We do hope that Sibelius will handle Unicode/SMuFL fonts correctly in a near future, allowing a smoother use of November2[1] and a full access to it.

Sibelius Windows Users

A bug in Sibelius for Windows currently prevents from using any 3rd-party fonts correctly, so we cannot support this platform until this is fixed in Sibelius - sorry!

LilyPond

2.18.2 and up

The November 2.0 installer adds some special snippet ".ly" files to LilyPond /share folder for the font to be used. That way all 1000+ symbols can potentially be used, using various entry methods.

Windows or Mac LilyPond can run the regular installer to move the files to the right location (recommended), or just do it manually from the November 2.0 folder.

Also, Linux users can launch a special script found in the November 2.0/LilyPond folder.

The November 2.0 LilyPond snippets offers a basic support for the common music notation. Of course, advanced users can modify and enhance these snippets depending on their need, in order to access rarer symbols; the mechanism to access November2 characters is pretty simple.

Installation

Whichever version(s) of Finale, Sibelius[2] or LilyPond[3] you use, the November 2.0 installer will place all the files you need to the right location, all automatically.

The installer will also create a **November 2.0** folder in your **user root directory** (Mac), or in your **My Documents** folder (Windows). In this folder is the documentation and all the package's files, so you can consider it as precious backup.

Also, if you previously owned November 1.0, any "old" files will be moved to a backup folder within your November 2.0 folder, so nothing will be lost.

Apart from the fonts, many important component files are installed for each software; they are the key for an easy use of November 2.0 in your favorite environment. As an example, for Finale, you get many librairies with predefined articulations, expressions or smart shapes for use in many different situations: baroque, avant-garde, percussion, accordion, jazz etc.

---

[1] And, beyond November2, to any SMuFL compliant fonts.

[2] Mac-only for now (see the Sibelius sections).

[3] If you are running LilyPond under Linux though, you must launch the **install_november2.sh** script found in the November 2.0/LilyPond folder.

NB: you need to have administrator rights in order to install November 2.0 properly.

Free Technical Assistance

Email Tech Support

By purchasing November 2.0, you get **free and unlimited** email technical support at:

november@klemmhotline.de

(in English or German).

So if anything goes wrong or simply if you have any question about the use of November 2.0, you will never be left in the dark! ;-)

Free Maintenance Updates

We are dedicated to provide the best user experience with our music font. New package versions will be regularly available to registered users during the lifetime of November 2.0 - for free!

Credits

November 2.0 has been crafted using George William's inspiring typography free software FontForge (http://fontforge.github.io/). Not sure where I would be without this marvelous tool!

Thanks to Daniel Spreadbury from Steinberg's, father of SMuFL and designer of the Bravura font, and to the whole SMuFL community ; they all helped me all lot to find my way into this new realm.

Thanks to Abraham Lee, a fellow music font designer, who helped me to build the November2 support for LilyPond.

Thanks to fellow composers or performers Yan Maresz, Karim Haddad, Mauro Lanza, Lorenzo Pagliei, Nicolas Mondon, Carmine Cella and Stanislas de Nussac who double-checked November 2.0 symbol map to be sure I did not miss anything crucial!

- And thanks to Jill & Aliocha for their benevolence and patience!
